Use Case:

View Augur Documentation

Description:

This use case starts with a developer who seeks to install Augur with their specific operating system to streamline the process, as opposed to just having one operating system guide for Ubuntu. We are seeking to provide clear and concise documentation for the installation process on Ubuntu, Mac OS X, and Fedora machines. This includes but is not limited to: forking Augur and cloning it into the developers system, the installation process of Augur, and deploying Augur. This use case ends when the developer has successfully installed and deployed Augur on their system and is able to develop with Augur.

Functional Requirements:

- Documentation should exist for Ubuntu, Mac OS X, and Fedora.
- Documentation should exist for installation and hosting Augur.
- Documentation should exist for developing with Augur.

Technical Requirements:

- Website for hosting documentation, or another means of displaying the documentation.
- Markup syntax parser for readable and clear documentation.

Triggers:

- Actor views the documentation locally or on a hosting site.

Actors:

- Developers
- Augur Users (non-developers)

Preconditions:

- User wants to use Augur documentation.

Main Success Scenario (Goals):

- Actor successfully installs and runs Augur, and gains knowledge of how to develop with Augur.
- Actors can read and understand instructions easily providing them with the ability to navigate through all instructions that are given.
- Actor does not need to seek additional documentation from other websites for their specific operating system, but is instead able to follow the provided documentation to fully install and develop with Augur.

Alternate Success Scenarios:

- Actor gains knowledge of how to develop with Augur, but does not install it.

Failed End Condition:

- Actor is unable to install or host an Augur instance.
- Actor does not understand the documentation.
- Actor uses outside sources to finish installing and/or deploying Augur (i.e. documentation is incomplete).
